# ROBOFOLIO

Lead ID: RF-2026-002
Generated: 2026-02-18

## COMPANY INFORMATION

| Example Corp GmbH |
|---|
| Industry: Home Appliances / Refrigeration |
| Location: Germany |
| Annual Revenue: > EUR 1 Bn (Group) |

## PRIMARY CONTACT

| Contact: J. Müller |
|---|
| Title: Project Lead (tbd) |
| Email: tbd |
| Phone: tbd |

## PROJECT OVERVIEW

| | |
|---|---|
| ***Application Type:*** | Adhesive Tape Application / Door Securing (Cobot) |
| ***Primary Goal:*** | Automate manual adhesive tape application on built-in refrigerator doors using a collaborative robot (cobot). Goals: reduce labor dependency, ensure consistent quality, and meet cost target of approx. EUR 5 per door. |
| ***Current Process:*** | Manual application of 3 adhesive tape strips per door by workers on a conveyor line. Cycle time approx. 25 seconds per strip (~75s total). Worker qualification for manual taping is becoming increasingly difficult to maintain. 20 appliance variants (3 widths, 5 heights) add process complexity. |

## QUALIFICATION (BANT)

| BUDGET | AUTHORITY | TIMELINE |
|---|---|---|
| Target: < EUR 5 per door | To be clarified | No fixed timeline |
| Benchmark for profitability, still to be confirmed | Contact via J. Müller and Max (Robofolio) | Exploratory phase, no deadline set |

## TECHNICAL REQUIREMENTS

| | |
|---|---|
| ***Required Features:*** | Collaborative robot (cobot), adhesive tape applicator (end effector), vision system for variant detection, conveyor belt integration, automatic variant changeover (20 types) |

| | |
|---|---|
| ***Production Volume:*** | To be determined (units per shift / day / year) |
| ***Cycle Time Target:*** | 3 strips x 25 seconds = ~75 seconds per door (plus positioning) |
| ***Environment / Constraints:*** | Door weight up to 40 kg, door dimensions 60x60 cm to 60x200 cm, 3 different widths, 5 varying heights, conveyor-based transport, collaborative operation without safety fencing |

## LEAD SCORE: 60/100

Medium: Technical use case clearly defined, no fixed timeline, budget benchmark available but still to be confirmed. Exploratory phase.

## NEXT STEPS

1) Schedule technical workshop with Example Corp 2) Detailed requirements gathering (tape positions, tape specifications, production volumes) 3) Develop feasibility study and solution concept 4) Proof of concept on selected variants

## KEY INSIGHTS

| *Insight* | *Detail* |
|---|---|
| Labor Shortage | Worker qualification for manual taping is becoming increasingly difficult to maintain — growing attractiveness of automation |
| Cost Efficiency | Benchmark approx. EUR 5 per door for application (still to be confirmed) |
| Glass Doors | Weight up to 40 kg, dimensions from 60x60 cm to 60x200 cm |
| Variance | 20 variants: 3 widths x variable heights (5 levels) |
| Operating Mode | Fully autonomous operation on conveyor, no worker required, but collaborative (no safety fencing) |
| End Product | Built-in refrigerators (Einbaugerate) |

## OPEN QUESTIONS

| *No.* | *Topic* | *Description* |
|---|---|---|
| 1 | Tape Specification | Type, width, length, material, adhesion strength |
| 2 | Tape Positions | Exact positions of 3 strips per door, tolerances |
| 3 | Conveyor Details | Cycle time, fixation method, positioning accuracy |
| 4 | Variant Detection | Barcode, RFID, or MES integration? |
| 5 | Production Volume | Units per shift / day / year (for ROI calculation) |
| 6 | Floor Space | Available space next to conveyor, infrastructure |

*This lead has been pre-qualified by Robofolio. For questions, please reach out to J. Müller or Max.*

## REFERENCE PHOTOS — CURRENT PROCESS

The images below show the current manual adhesive tape application on built-in refrigerators. Blue tape strips are applied across door edges to prevent doors from opening during transport.

*Side view — tape strips on door edges*

*Front view — 3 strips per door visible*

*Angled view — upper and lower compartment secured*

## APPLIANCE VARIANT RANGE

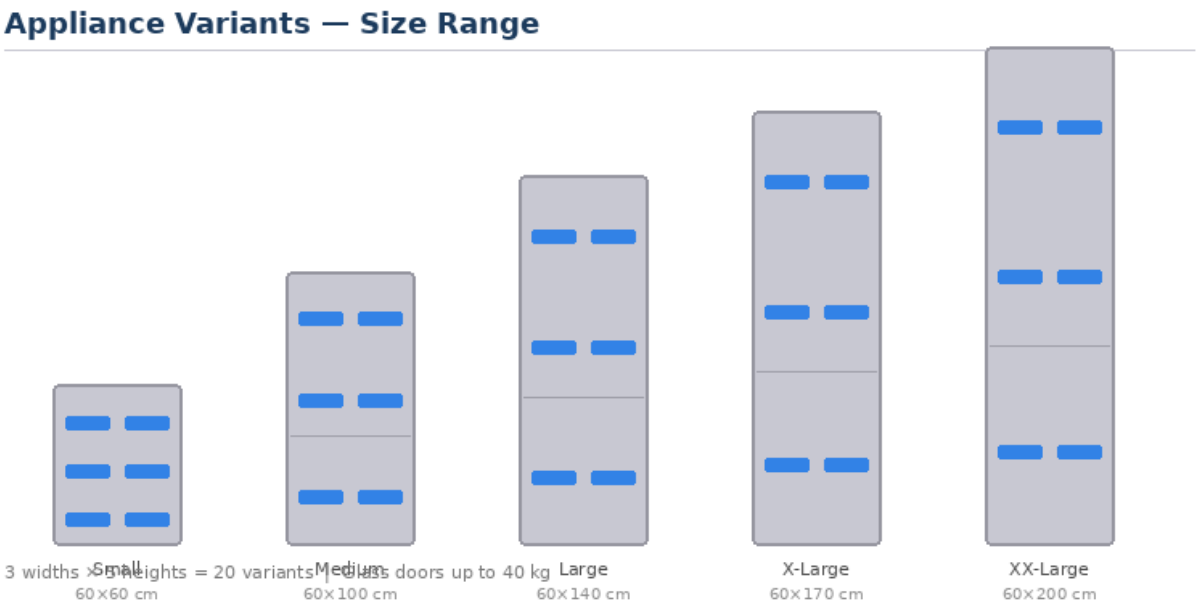

*Fig. 2: Size range of appliance variants — 3 widths x 5 heights = 20 different configurations*
